

## Bright solutions one after the other

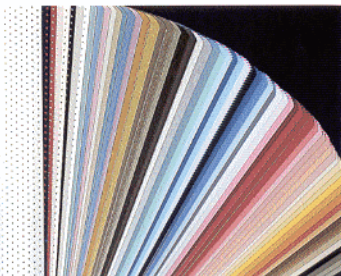

**Plain Strip for Venetian Blinds**

(Indoor Use)

We offer our customers strip which has not been lacquered, for example, plain strip for venetian blinds. High strength in conjunction with reduced thicknesses and smooth, clean surfaces are an absolute must for this particular application. We, therefore, use a special alloy for the production of untreated as well as pre-treated strip.

Aluminium venetian blinds when combined with colour are extremely versatile. They can be made to match any design concept exactly – a fact much appreciated by many well-known interior designers and a whole host of customers.

**Lacquered Strip for Accordion Blinds**

(Raffstore, outdoor use)

In our strip for accordion blinds, we combine the right alloy with a lacquering system specially suited to outdoor use. In this way, we can meet the high product requirements of our customers, for example, weathering resistance and durability, without any difficulty. Our lacquered strip for accordion blinds is corrosion-resistant, fade-resistant and abrasion-resistant; with its perfect lacquered surface, it is also an optically attractive product.
